

## SAFETY NET FOR ABOVEGROUND POOLS

### Installation & Maintenance Manual

#### BEFORE YOU START:

Thank you for your purchase of a WaterWarden Pool Safety Net. Please read these instructions in their entirety prior to installation to ensure a smooth and proper installation. Retain manual for future reference. The WaterWarden safety net can be installed on most aboveground pools. If you are unsure as to whether or not your particular pool will work with a WaterWarden pool net, please call (609) 212-0221 Monday-Friday, 9:00 AM to 5:00 PM for help before you begin.

#### NECESSARY EQUIPMENT:

- Drill
- 9/64" Drill Bit
- Extension Cord
- Black marker (nonpermanent)
- ½" Stainless steel sheet metal screws (2 per upright)
- Protective Gardening Gloves

#### INCLUDED COMPONENTS:

- WaterWarden Pool Net with Tensioning System and Guide Cords
- Brackets
- Hooks
- Binding cord
- Drilling template

#### PLACING THE BRACKETS:

- (1) Removing drilling template from package. Determine the width of pool's top rail, and cut template on the appropriate dotted line. For Intex Style pools (do not use template) brackets should be installed 10" from top rail.
- (2) Align drilling template with top of any pool upright, directly underneath top rail cap. Using a nonpermanent marker, mark the two spots labeled "drill here".
- (3) Repeat step (2) for each upright.
- (4) Drill through marked spots into each upright.
- (5) Place a bracket onto the first drilled upright, with round screw hole on the bottom, and keyhole for hook at the top. (See Fig. 1). Use ½" Sheet metal stainless steel screws to attach bracket to upright. For best results, use a drill with speed control to prevent over-tightening of screws.
- (6) Repeat step (5) with remaining brackets and screws, attaching one bracket to each.

#### POSITIONING THE POOL NET:

Unfold the WaterWarden Safety Net and spread over top of the pool. Proceed around the pool and hook net to the brackets.

*Fig. 2*

#### TRIMMING AND SHAPING THE POOL NET TO FIT THE POOL:

When you are sure that the net is straight and as tight as you can get it to be, you will trim away any excess netting from behind the hooks and anchors. Use a soldering iron for this, in that way you will also seal off any raw edges of netting and prevent fraying or unraveling.

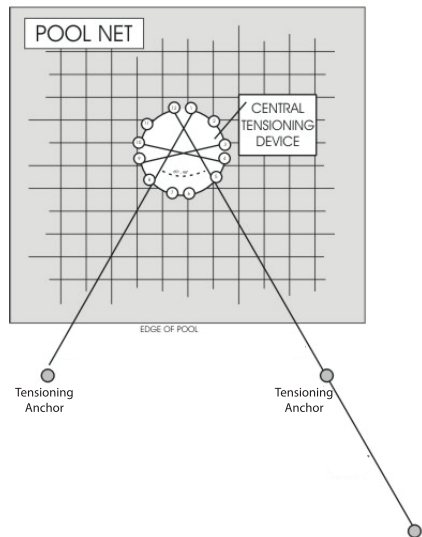

The edges of net should curve neatly from bracket to anchor (Fig. 2). Take extreme caution not to cut the net too close to the pool edge.

## DOUBLE-BINDING THE POOL NET:

Ensure that the CTS is still closed.

- A) If desired, wear protective gardening gloves during the binding process to protect your hands from the chaffing on the rope. Precut Binding Cord into 8' lengths to make it easier to work with. Begin at any bracket, and tie a length of cord onto the hook with a non-slip knot. Weave the Binding Cord in and out of each square to the next hook, and knot it tightly around the hook. Continue around the perimeter of the entire net, weaving in and out of the squares and knotting to the hooks. When you come to the end of one length of Binding Cord, simply tie on another length of cord and proceed as described.

Fig. 3

- B) Locate tensioning device at center of WaterWarden Safety Net. The Tensioning Cord is pre-threaded through the pulley system. The ends of the Tensioning Cord are tied to the edges of the WaterWarden Safety Net. Untie the ends of the Tensioning Cord. Make sure that the two ends of the cord cross one another at an angle of 90. (Fig.3) Attach one Tensioning Cord hook into the closest bracket (use second keyhole on the bracket to fasten this hook). Pull opposite end of the Tensioning Cord taut, and clip the second tensioning hook into its closest bracket. This should provide even tension for the WaterWarden Safety Net System, to keep the Net suspended well above the water line.

**NOTE:** Water level should always be maintained correctly in accordance with pool manufacturer's instructions to ensure safety. Refer to Pool Owner's Manual to determine correct water level.
